## SAVE 25% on ULTRAhyb® and ULTRAhyb-Oligo

DNA Probe

### Get More From Your Blots!

A novel hybridization solution that increases the sensitivity of RNA probes up to 20X and DNA probes up to 100X in Northern blots. Using standard hybridization buffers, only 1-5% of target molecules on a blot hybridizes to probe, making blots a relatively insensitive method for nucleic acid analysis (*Vernier et al. (1996) Anal. Biochem. 235: 11-19*, and data generated at Ambion).
